

PRESSURE/VACUUM VALVE & FLAME ARRESTER

MODEL 8800A

MODEL 8800A

The Groth Model 8800A Pressure/Vacuum Relief Valve & Flame Arrester are designed to protect your tank from damage created by overpressure or excessive vacuum, at the same time they provide protection from flame propagation. The result is reduced emission level and increased fire protection and safety.

Technical Details

- Sizes: 2" (DN 50) through 12" (DN 300)
- Pressure Settings 0.5oz/in² to 15 psig
- Vacuum Settings: 0.5 oz/in² to 12 psig
- Materials: Aluminum, Carbon Steel, Stainless Steel and other materials

Features

- Cushioned Air Seating
- Fluoropolymer seating diaphragms are standard to minimize sticking caused by resinous vapors and atmospheric moisture
- Self draining housing and drip rings
- Spiral-wound, crimped ribbon flame element
- Modular Construction

Options

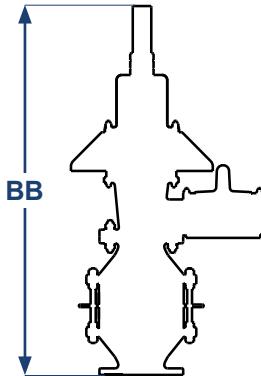

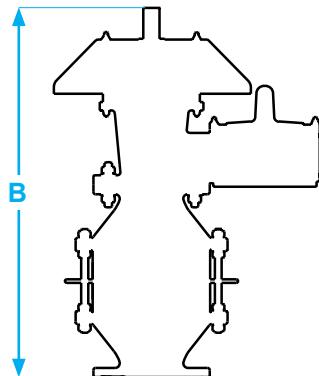

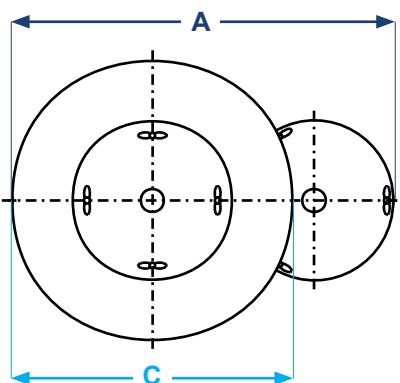

- Buna-N, Fluoropolymer, FKM

25.0	14.4	20.4	46.0	83.5	175	281	442	563
30.0	17.3	22.6	50.9	92.4	194	311	489	623

Flow Capacity Calculation

Flow capacity values listed above are based on full open valves at 100% overpressure. Read the flow capacity at 100% overpressure directly from the table above. Use linear sted. If the allowable overpressure is less than 100%, modify the flow capacity using the appropriate "C" factor from the table. If allowable overpressure is more than 100%, consult your Groth Representative.

Calculate the percentage overpressure by the following formula. Note that all pressures are gauge pressure expressed in the same units of measure.

P_f = Flowing pressure

P_s = Set pressure

$$\% OP = [(P_f - P_s)/P_s] \times 100$$

Calculate flow capacity at less than 100% overpressure according to the following example.

"C" Factor Table										
%OP	0	1	2	3	4	5	6	7	8	9
10										
20										
30										
40										
50	0.72	0.73	0.73	0.74	0.75	0.75	0.76	0.77	0.77	0.78
60	0.78	0.79	0.80	0.80	0.81	0.81	0.82	0.82	0.83	0.84
70	0.84	0.85	0.85	0.86	0.86	0.87	0.88	0.88	0.89	0.89
80	0.90	0.90	0.91	0.91	0.92	0.92	0.93	0.93	0.94	0.94
90	0.95	0.95	0.96	0.96	0.97	0.97	0.98	0.99	0.99	1.00

Example to find "C" factor from table:

Read "C" factor for 75% overpressure at intersection of row 70 and column 5

"C" factor at 75% OP = 0.87

Example Flow Capacity Calculation

6" Model 8800A

1. Read flow capacity at set pressure from table Flow = 61,500 SCFH

4 InWC set pressure [P_s]

2. Calculate overpressure

$$\% OP = [(7 - 4)/4] \times 100 = 75\%$$

7 InWC flowing pressure [P_f]

3. Read "C" factor from table

$$"C" = 0.87$$

4. Calculate flow capacity

$$\text{Flow} = 0.87 \times 61,500 = 53,505 \text{ SCFH}$$

PRESSURE RELIEF CAPACITY

Air Flow Capacity at 100% Overpressure (Double Set Pressure)
1000 Normal Cubic Meters per Hour at 0° C

Set Pressure (P _s) mmWC	Size In (mm)

750	0.64	1.44	2.62	5.50	8.80	13.8	17.6

Flow Capacity Calculation

Flow capacity values listed above are based on full open valves at 100% overpressure. Read the flow capacity at 100% overpressure directly from the table above. Use linear interpolation if the set pressure is not listed. If the allowable overpressure is less than 100%, modify the flow capacity using the appropriate "C" factor from the table. If allowable overpressure is more than 100%, consult your Groth Representative.

Calculate the percentage overpressure by the following formula. Note that all pressures are gauge pressure expressed in the same units of measure.

P_f = Flowing pressure

P_s = Set pressure

$$\% \text{ OP} = [(P_f - P_s)/P_s] \times 100$$

Calculate flow capacity at less than 100% overpressure according to the following example.

Example Flow Capacity Calculation

6" Model 8800A

150 mmWC Set Pressure [P_s]

250 mmWC Flowing Pressure [P_f]

1. Read flow capacity at set pressure from table Flow = 2,210 NCMH

$$\% \text{ OP} = [(250 - 150)/150] \times 100 = 67\%$$

$$\text{"C" factor at } 67\% \text{ OP} = 0.82$$

$$\text{Flow} = 0.82 \times 2,210 = 1,812 \text{ NCMH}$$

"C" Factor Table										
%OP	0	1	2	3	4	5	6	7	8	9
10										
20										
30

20.0	11.6	14.7	33.1	55.1	116	184	282	381
25.0	14.4	16.6	37.5	62.3	131	209	319	432
30.0	17.3	18.3	41.5	68.9	145	231	353	478

Flow Capacity Calculation

Flow capacity values listed above are based on full open valves at 100% over-vacuum. Read the flow capacity at 100% over-vacuum directly from the table above. Use linear interpolation if the set vacuum is not listed. If the allowable over-vacuum is less than 100%, modify the flow capacity using the appropriate "C" factor from the table. If allowable over-vacuum is more than 100%, consult your Groth Representative.

Calculate the percentage over-vacuum by the following formula. Note that all pressures are gauge pressure expressed in the same units of measure.

P_f = Flowing pressure

P_s = Set pressure

$$\% \text{ OV} = [(P_f - P_s)/P_s] \times 100$$

Calculate flow capacity at less than 100% over-vacuum according to the following example.

Example Flow Capacity Calculation

6" Model 8800A

1. Read flow capacity at set vacuum from table Flow = 46,700 SCFH

4 InWC set pressure [P_s]

2. Calculate over-vacuum $\% \text{ OV} = [(7 - 4)/4] \times 100 = 75\%$

7 InWC flowing pressure [P_f]

3. Read "C" factor from table "C" = 0.87

4. Calculate flow capacity Flow = 0.87 x 46,700 = 40,629 SCFH

"C" Factor Table										
%OP	0	1	2	3	4	5	6	7	8	9
10

Example to find "C" factor from table:

Read "C" factor for 67% over-vacuum at intersection of row 60 and column 7

"C" factor at 67% OV = 0.82

HOW TO ORDER

For easy ordering, select proper model numbers

Notes

- Include model number and setting when ordering.
 - For special options, consult factory.
 - When ordering steam jacket, include steam pressure/temperature.
- * Stainless steel guides, stems are standard with aluminum and carbon steel bodies. Stainless steel seats standard with carbon steel bodies.

Example

8 8 0 0 A - 0 2 - 1 1 5 1 - T 0

Indicates a 2" Model 8800A with Aluminum Body and Seat, 316 SS Pallet, Fluoropolymer Seat Diaphragm, and no other options.
